# **About the Cover**

Energen Corporation continues to focus on increasing our production of oil in the liquids-rich Permian Basin of west Texas. Our 3rd Bone Spring and Wolfberry wells generated excellent performances in 2012 and are expected to drive double-digit oil and natural gas liquids growth in 2013. The new year also will have Energen testing multiple horizontal drilling opportunities that are bringing new life to one of the oldest oil-producing regions in the United States.

<sup>\*\*</sup> Includes a non-cash, mark-to-market, after-tax gain of \$37.2 MM in 2012 and a non-cash, mark-to-market, after-tax loss of \$23.4 MM in 2011.

# **Corporate Profile**

## **Energen Corporation**

Headquartered in Birmingham, Alabama, Energen Corporation is a growing oil and gas exploration and production company complemented by its legacy natural gas distribution business. The company is focused on increasing its production of oil in the Permian Basin of west Texas and plans to test multiple horizontal drilling opportunities in 2013.

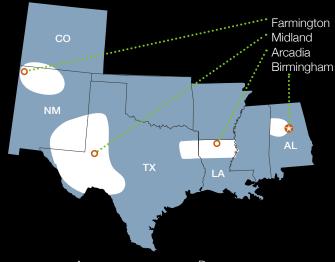

### **Energen Resources Corporation**

One of the most active drillers in the Permian Basin in Texas, Energen Resources is an independent producer of oil, natural gas liquids, and natural gas in the continental United States. Approximately 95 percent of the company's 346 million barrels of oil equivalent (MMBOE) proved reserves are located in the Permian Basin in Texas and in the San Juan Basin in New Mexico and Colorado. Energen Resources generated record production of 24.1 MMBOE in 2012 and is targeting 23 percent growth in oil and natural gas liquids in 2013.

### Alabama Gas Corporation

Energen's regulated subsidiary, Alabama Gas Corporation (Alagasco), provides Energen with the strength and stability of a mature natural gas utility. Alagasco is the largest natural gas distributor in Alabama, providing clean-burning, energy-efficient natural gas to approximately 425,000 homes, businesses, and industries in central and parts of north Alabama.

# To Our Shareholders

Energen Corporation continued to focus in 2012 on increasing our production of oil and natural gas liquids (collectively, "liquids") in the Permian Basin of west Texas. Our record level of drilling activity showcased excellent performances from our 3rd Bone Spring and Wolfberry wells that contributed to another year of record production.

The company's progress in 2012 places us in an excellent position to maintain strong, double-digit liquids growth in 2013 as we continue to develop our core Permian plays. At the same time, we are eager to explore the exciting potential offered by emerging horizontal opportunities in the Midland and Delaware basins.

Success in even one of these high-profile horizontal plays could lead to many years of active drilling in the Permian Basin as well as many years of organic liquids production growth.

ormes 2. M= Marries II

James T. McManus, II
Chairman and Chief Executive Officer

February 28, 2013

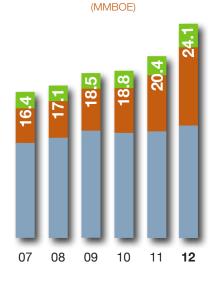

"THE COMPANY'S PROGRESS IN 2012 PLACES US IN AN EXCELLENT POSITION TO MAINTAIN STRONG, DOUBLE-DIGIT LIQUIDS GROWTH IN 2013 AS WE CONTINUE TO DEVELOP OUR CORE PERMIAN PLAYS."

### **Record Production**

Production in 2012 grew 18 percent to a record 24.1 millon barrels of oil equivalent (MMBOE). Not surprisingly, growth in our Permian Basin production was substantial, rising approximately 44 percent from year-end 2011. Aggregate production in our natural gas regions grew less than 2 percent, as we limited our capital investment there due to the continued low commodity price of gas.

Oil production increased approximately 40 percent in 2012, while natural gas liquids production grew 18 percent. Natural gas volumes rose 6 percent primarily due to its presence in our Permian Basin product stream; approximately 15 percent of our growing Permian Basin production is natural gas.

### **OIL AND GAS PRODUCTION**

## 3rd Bone Spring Sand

Energen's 3rd Bone Spring program generated outstanding results in 2012 as we focused on developing our core 3rd Bone Spring acreage located east of the Pecos River in Ward, Winkler, and Loving counties in the Delaware Basin.

With an initial rate of 2,257 barrels of oil equivalent (BOE) per day, the Black Mamba 1-57 #1H well in Loving County emerged as the company's top performer and what is believed to be the best performing well drilled by any operator to-date in the Delaware Basin in Texas.

Energen Resources, our oil and gas exploration and production subsidiary, drilled 40 net horizontal wells in our core area during 2012. The 35 net wells tested during the year produced at an average initial rate of more than 1,000 BOE per day, of which 68 percent was oil. The 30-day average rate of 32 net wells with sufficient production history was 661 BOE per day; 65 percent was oil.

On the east side of the Pecos River, our core holdings total approximately 30,000 net acres; at year end, approximately 9,500 net acres were undeveloped. We estimate that some 59 additional wells on 160-acre spacing remain to be drilled.

Having now delineated our core acreage position, Energen Resources expects to drill second and third wells on each lease to round out the program over the next couple of years. In 2013 we plan to drill 28 net wells with 4,400-foot lateral lengths in the 3rd Bone Spring sand.

Our estimate of gross ultimate recovery per 3rd Bone Spring well is 475,000 BOE. We have a 100 percent working interest and 75 percent net revenue

interest in our remaining wells. The average product mix of these wells is estimated to be 66 percent oil, 18 percent natural gas liquids, and 16 percent gas.

At \$90 per barrel of oil and \$4 per Mcf of natural gas (and assuming a natural gas liquids price realization of 40 percent), we estimate that the 59 wells remaining in our 3rd Bone Spring program will generate an attractive 50 percent pre-tax rate of return for the company.

## Vertical Wolfberry

In the Midland Basin, our vertical Wolfberry program continued to perform to expectations in 2012. Energen Resources drilled 167 net Wolfberry wells during the year and completed and tested 172 net wells (including seven drilled in late 2011). These wells had an average stabilized rate of 90 BOE per day, of which 75 percent was oil. The average 30-day rate of the wells was 76 BOE per day, with 77 percent oil.

Energen Resources has approximately 65,000 net acres in the Midland Basin that we believe are prospective for the vertical Wolfberry play; and approximately 34,000 net acres remain undeveloped. Based on 40-acre spacing, we estimate there are 850

potential locations yet to be drilled. Downspacing to 20 acres could add another 800 locations; some of these downspacing locations may be displaced by the potential drilling of higher-return horizontal wells.

In 2013 we plan to drill 167 net wells in the vertical Wolfberry play. The estimated gross ultimate recovery of the mix of Wolfberry wells in our current five-year plan is 165,000 BOE. We have a 90 percent working interest and 70 percent net revenue interest in these wells. The product mix is estimated to average 60 percent oil, 24 percent natural gas liquids, and 16 percent gas.

At \$90 per barrel of oil and \$4 per Mcf of natural gas (and assuming a natural gas liquids price realization of 40 percent), we estimate that our vertical Wolfberry wells will generate an average pre-tax rate of return for the company of 23 percent.

## **Opportunities: Midland Basin**

During 2012 Energen identified 1,280 potential drilling locations on our acreage in the Midland Basin and Eastern Shelf that we believe are prospective for two emerging horizontal plays: the Wolfcamp shale and the Cline shale. Based on well data and internal evaluations, we estimate that our current acreage

position supports 860 drilling opportunities in the upper Wolfcamp and Cline as well as 420 potential locations in the middle and lower benches of the thick Wolfcamp shale. These estimates assume that wells are drilled on 160-acre spacing.

Energen is a 21 percent working interest owner in a successful upper Wolfcamp well in Glasscock County drilled by a neighboring operator in 2012. This operator has drilled numerous successful Wolfcamp and Cline wells near our acreage in Glasscock and Reagan counties, and other operators are working to prove up the upper and middle Wolfcamp benches further north, in Midland and Martin counties.

Our analysis of public data and additional proprietary data has increased our confidence level that the Wolfcamp and Cline shales hold significant upside potential for Energen.

We plan to drill six net wells in the Midland Basin in 2013 to test the Wolfcamp shale and, possibly, the Cline. Drilling is scheduled to get under way in Glasscock County in the second quarter of 2013 with a test of the upper Wolfcamp.

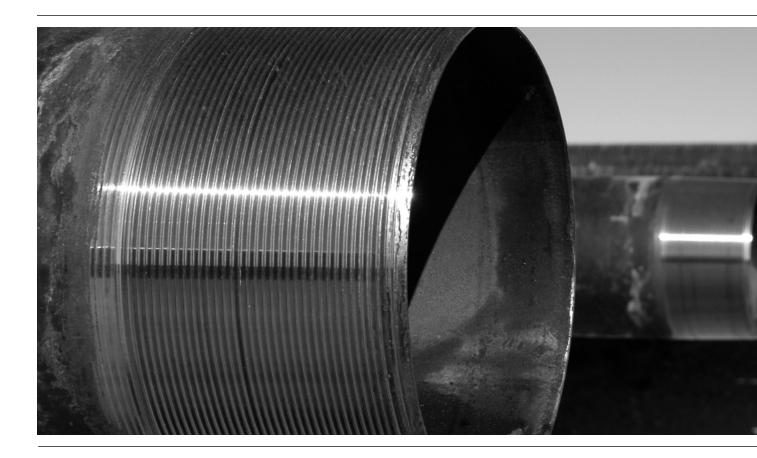

## **Opportunities: Delaware Basin**

In the latter half of 2012, we began to examine the Wolfcamp potential on our Delaware Basin acreage east of the Pecos River by drilling five operated wells in various Wolfcamp targets.

The first of these wells generated good early results; thereafter, production declined more rapidly than expected. The other four wells are in various stages of completion at the current time. Work on the first of seven net Wolfcamp wells we plan to drill in the Delaware Basin in 2013 is now under way.

As we learn more about the Wolfcamp shale in the Delaware Basin and optimize our landings and completions, we will be in a much better position to understand the Wolfcamp's full potential east of the Pecos River.

Meanwhile, across the river in Reeves County, BHP Billiton currently is completing a middle Wolfcamp well in which we have a 50 percent non-operated interest. Other operators working in Reeves County have recently reported encouraging results from the Wolfcamp shale.

With approximately 110,000 net acres prospective for the Wolfcamp shale in the Delaware Basin, success in even one of the three Wolfcamp benches could generate hundreds of potential drilling locations on 160-acre spacing.

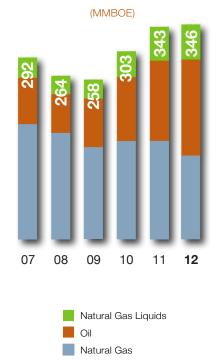

### Proved Reserves Total 346 MMBOE

Proved reserves at year-end 2012 totaled 346 MMBOE but increased only slightly over 2011 after a 33 percent decline in natural gas prices and a 28 percent decline in natural gas liquids prices resulted in a downward reserve revision of approximately 30 MMBOE. In addition, Energen Resources produced a record 24.1 MMBOE during 2012.

These two items effectively offset the addition of approximately 58 MMBOE of reserves, most of which were previously classified as unproved reserves. We also added some 12 MMBOE of mainly Wolfberry reserves through the acquisition of proved properties and leasehold.

Oil and natural gas liquids reserves represented 61 percent of total proved reserves and are expected to increase as Energen continues to focus on the exploration and development of the liquids-rich Permian Basin.

## **PROVED RESERVES**

## 100 Wolfcamp Locations Added

Probable and possible reserves at year-end 2012 declined to 407 MMBOE. Substantially lower gas and natural gas liquids prices resulted in the loss of approximately 137 MMBOE of unproved San Juan Basin reserves at the end of the 2012. In the Delaware Basin, 3rd Bone Spring reserves west side of the Pecos River were revised down by some 64 MMBOE.

We added net reserves of approximately 36 MMBOE for 100 net upper Wolfcamp locations in Glasscock County; this represents estimated gross recoveries of 460,000 BOE per well assuming 160-acre spacing and 4,400-foot horizontal lengths. Energen also gained 18 MMBOE of unproved Wolfberry reserves through acquisition.

Importantly, a lot of potential is not yet reflected in our unproved reserves. This potential includes Wolfberry downspacing, horizontal Cline in the Midland Basin, horizontal Wolfcamp in the Delaware Basin, horizontal Avalon shale in the Delaware Basin; and 685 net horizontal Wolfcamp locations (upper, middle, and lower).

Our total proved, probable, and possible reserves now total 753 MMBOE. Oil and natural gas liquids comprise more than 55 percent of these reserves, and more than half are in Permian Basin.

## Earnings and Dividends

A 30 percent decline in the realized sales price of natural gas pressured Energen's earnings in 2012. Net income for the year totaled \$253.6 million, or \$3.51 per diluted share, as compared with \$259.6 million, or \$3.59 per diluted share in 2011.

For comparative purposes, it is important to note that each period includes non-cash adjustments for mark-to-market gains or losses on our open hedge contracts. In 2012 Energen recorded a mark-to-market gain of \$37.2 million after tax, or 52 cents per diluted share, while a mark-to-market loss of \$23.4 million, or 32 cents per diluted share, was included in 2011 earnings.

Low natural gas prices also resulted in a \$13.4 million after tax, or 19 cents per diluted share, write-down of natural gas properties in East Texas in 2012.

Energen's utility operations under Alabama Gas Corporation (Alagasco) generated net income of \$49.4 million in 2012; this \$2.8 million increase from 2011 reflected Alagasco's ability to earn on a higher level of equity representing investment in utility plant.

In January 2013 your Board of Directors increased Energen's annual cash dividend for the 31st consecutive year. The dividend, which is supported by Alagasco, increased 3.6 percent to 14.5 cents per share. On an annualized basis, Energen's new dividend rate is 58 cents per share.

### The Outlook for 2013

During 2013 Energen Resources plans to invest \$875 million to explore and develop our Permian Basin assets, including the drilling of approximately 300 net wells. We plan to invest only \$25 million in our traditional gas regions, primarily for recompletions in the San Juan Basin.

Approximately three-fourths of our capital investment in 2013 will focus on the continued

development of our vertical Wolfberry and 3rd Bone Spring assets. These two plays are expected to drive double-digit liquids production growth in 2013.

At the same time, we plan to invest \$130 million to test emerging plays in the Midland and Delaware basins.

Production in 2013 is estimated to increase 8 percent to 26.1 MMBOE. Oil and natural gas liquids production is projected to grow 20 percent and 31 percent, respectively, while natural gas production is estimated to decline by 5 percent. Wolfberry and 3rd Bone Spring production is each estimated to increase approximately 50 percent over 2012 levels.

An important part of our financial strength in 2013 will again be an excellent hedge position. Approximately 70 percent of our total estimated production in 2013 is hedged, including 84 percent of our estimated oil production at an average NYMEX price of \$90.95 per barrel, 31 percent of estimated natural gas liquids production at a price of \$1.02 per gallon, and 69 percent of estimated natural gas production at an average NYMEX-equivalent price of \$4.63 per Mcf.

Hedges also are in place that substantially limit our exposure to the volatile Midland to Cushing differential.

The company's utility subsidiary has the opportunity to earn a return on average equity that is estimated to be approximately \$375-\$380 million in 2013.

Calendar year 2012 was a busy and exciting year for Energen that sets us up in 2013 to generate strong production growth from existing plays while exploring several emerging opportunities in the Permian Basin.

The year was not problem free, of course. For example, in the Permian Basin, we and other operators dealt with issues such as transportation and infrastructure constraints and ethane rejection.

Perhaps the most important thing about 2012 was that we learned more every day about the new generation of plays – both in development and emerging – that are giving new life to the Permian Basin and that hold substantial value for Energen.

Alagasco finished implementing phase two of its successful Resource Management System during 2012. The technology initiative was first used to help improve the customer experience through service efficiencies; this past year, it was expanded to our pipeline operations. Pictured above, left to right, Alagasco employees Derrik Hogland and Dan Ingram use this new technology on vehicles to better coordinate and manage the maintenance of Alagasco's system integrity.

# Forward-looking Statements

Certain statements in the Energen Corporation 2012 Summary Annual Report express expectations of future business and financial performance and condition and often contain words such as "expect," "anticipate," "intend," "plan," "believe," "seek," "see," "project," "will," "estimate," "may," and other terms of similar meaning. These are forward-looking statements within the meaning of Section 27A of the Securities Act of 1933, as amended, and Section 21E of the Securities Exchange Act of 1934, as amended, and are subject to the safe harbor provisions of those sections and the Private Securities Litigation Reform Act of 1995.

All statements based on future expectations rather than on historical facts are forward-looking statements that are dependent on certain events, risks, and uncertainties (many of which are beyond our control) that could cause actual results to differ materially from those anticipated. Some of these include, but are not limited to, economic and competitive conditions, production levels, reserve levels, energy markets, supply and demand for and the price of energy commodities including oil, gas, and natural gas liquids, fluctuations in the weather, drilling risks, costs associated with compliance with environmental and regulatory obligations, inflation rates, legislative and regulatory changes, financial market conditions, the Company's ability to access the capital markets, acts of nature, sabotage, terrorism (including cyber-attacks) and

other similar acts that disrupt operations or cause damage greater than covered by insurance, future business decisions, utility customer growth and retention and usage per customer, litigation results and other factors, and uncertainties discussed in the Company's public filings and news releases, all of which are difficult to predict.

While it is not possible to predict or identify all the factors that could cause the Company's actual results to differ materially from expected or historical results, the Company has identified certain risk factors that may affect its future business and financial performance. For a more complete discussion of these risk factors, see Item 1A, Risk Factors, in the Form 10-K that accompanies this Summary Annual Report; it is incorporated by reference into this forward-looking statements disclosure.

Except as otherwise disclosed, forward-looking statements do not reflect the impact of possible or pending acquisitions, investments, divestitures, or restructurings. The absence of errors in input data, calculations, and formulas used in estimates, assumptions, and forecasts cannot be guaranteed.

Neither the Company nor its subsidiaries undertakes any obligation to correct or update forward-looking statements whether as a result of new information, future events, or otherwise.
